THE ELIZABETH GLASER PEDIATRIC AIDS FOUNDATION IN UGANDA

Since 2000, the Elizabeth Glaser Pediatric AIDS Foundation (EGPAF) has been supporting prevention of mother-to-child transmission of HIV (PMTCT) and HIV/AIDS care and treatment services in Uganda.

EGPAF-Uganda is a leading provider of technical assistance to Uganda’s Ministry of Health, and provides clinical service delivery support at the facility, district, regional, and national levels. We work closely with Uganda’s Ministry of Health and other partners to increase access to comprehensive, high-quality HIV prevention, care and treatment, and TB services for women, children, and families living with and affected by HIV and AIDS. EGPAF-Uganda currently supports services at 771 health facilities in 16 districts in the Southwest Region.

KEY PROGRAM ACCOMPLISHMENTS**

| Provided PMTCT services to over 3,033,000 pregnant women |
| Supported over 771 health facilities |
| Prevented the transmission of HIV to over 32,400 babies |
| Initiated more than 170,900 women on ART |

COUNTRY PROFILE*

- Population: 41,487,000
- Number of people living with HIV: 1,400,000
- Adult (15-49 years of age) HIV prevalence: 6.5%
- Women aged 15 and older living with HIV: 740,000
- Children (0-14 years of age) living with HIV: 130,000
- Deaths due to AIDS in 2016: 28,000
- HIV-positive pregnant women receiving antiretroviral treatment (ART): 79%
- Children living with HIV receiving ART: 47%
- Estimated TB-related deaths among people living with HIV in 2016: 14,000
- Co-management of TB and HIV treatment: 46%

EGPAF-UGANDA PROGRAM GEOGRAPHIC COVERAGE

** Data as of May 2018
United States Agency for International Development (USAID) Regional Health Integration to Enhance Services in Southwest Uganda (RHITES-SW) Project (2015-2020)

The RHITES-SW project supports 771 health facilities in the Southwest Region of Uganda. Its aim is to increase the availability, accessibility, and quality of integrated health services including HIV and TB prevention, care and treatment; maternal, neonatal, and child health (MNCH); nutrition counseling; malaria treatment; and other primary care services. To enhance the sustainability of services, EGPAF promotes district ownership of all activities, including all work planning and roll-out of new services, through provision of mentorship and supervision to district health offices, health centers, and facilities.

Development of a Model for National Scale-up of the Pratt Pouch to Expand Infant Nevirapine Prophylaxis in Uganda, PMTCT and Save Infant Lives (2016-2020)

Through the Saving Lives at Birth initiative, EGPAF, the Ugandan Ministry of Health, and Pratt Pouch Consulting will introduce and scale-up the Pratt Pouch in antenatal care, delivery, and post-natal care facilities throughout the country. The Pratt Pouch is an improved infant antiretroviral prophylaxis delivery mechanism, which enables better dosing accuracy and expanded use of nevirapine. This project aims to reach 40,000 HIV-exposed infants in up to 23 districts to decrease the HIV infection rates among infants at six to eight weeks of age.

Pediatric Active Case Finding of HIV through Facility and Community-based Testing Strategies in Uganda (PedAC) Study (2017-2018)

This study examines different service delivery strategies for actively finding HIV-positive children to determine levels of success with diagnosis, linkage to care, and treatment initiation in Uganda. This study will also aim to identify steps in the PMTCT cascade at the individual, facility, and community levels in which HIV prevention, diagnosis, and care and treatment services were missed.

Delivering Technical Assistance (DELTA) Projects

Refining and Validating a Pediatric & Adolescent HIV Eligibility Screening Tool for Primary Health Care Providers in Uganda (2016-2018)

Under the U.S. Centers for Disease Control and Prevention-funded Project DELTA, EGPAF is currently implementing three assignment in Uganda. One assignment will develop and validate an HIV eligibility screening tool for use by primary health care providers in Uganda. This screening tool will be used to identify children and adolescents who are eligible for HIV testing and counseling and also to identify those who come to the health facility with known HIV-positive status.

Validating a Pediatric and Adolescent HIV Eligibility Screening Tool Among the Orphan and Vulnerable Children Population in Uganda (2017-2018)

This DELTA assignment will utilize the HIV eligibility screening tool which will be validated for use in the orphan and vulnerable children population by front-line health workers and counselors.

Rolling Out the Differentiated Service Delivery (DSD) Model of Care in Uganda (2017-2018)

Through this assignment, EGPAF will provide technical assistance to the Uganda Ministry of Health and implementing partners to successfully implement DSD in Uganda.

Closing the Adult-Pediatric HIV Treatment Gap in Uganda (2018-2021)

With funding from the ELMA Foundation, EGPAF-Uganda is working to improve pediatric and adolescent HIV identification, linkage, and retention into care and treatment in eight districts of Southwest Uganda. The program supports health facilities to implement key strategic interventions, which include: strengthening provision of HIV testing services among children and adolescents at all service points; increase access to early infant HIV diagnosis; create stronger linkage to care and treatment; and strengthen retention efforts through client tracing. EGPAF-Uganda works with the District Health Offices to provide support supervision to facilities which ensures ownership and sustainability of the interventions.

In response to limited availability of second- and third-line pediatric and adolescent treatment options, Johnson & Johnson, EGPAF, and the Partnership for Supply Chain Management launched the New Horizons project, which aims to improve sustainable ART service delivery for children, and confront challenges faced by adolescents around disclosure, adherence, and psychosocial support. The heart of the Collaborative is a darunavir/etravirine donation program, which increases access to third-line pediatric and adult ART for children and adolescents failing second-line treatment.

Catalyzing Pediatric Tuberculosis Innovations (CaP TB) Project (2017-2021)

This Unitaid-funded project aims to improve TB screening in children – a disease which affects one million children worldwide. The project will accelerate access to TB diagnosis and new child-friendly treatments for both active and latent TB. Launched in 2017, CaP TB will bring new child-friendly TB drug formulations and improved diagnostic technology to ten countries, including Uganda.

EGPAF works hand-in-hand with Uganda’s Ministry of Health to formulate evidence-based policies supporting all persons affected by HIV. EGPAF actively participates in national technical working groups and advisory committees including: the Pediatric HIV Working Group; the TB/HIV Subcommittee; the MNCH Technical Working Group; the Adolescent Health Technical Working Group; the National TB Technical Working Group; the National AIDS Advisory Committee on PMTCT; the TB Advocacy, Communication and Social Mobilization Committee; and the PMTCT Monitoring and Evaluation Subcommittees.

EGPAF played a central role in the revision and adaptation of the Consolidated HIV Prevention, Care and Treatment Guidelines in 2016, recommending treatment initiation among all HIV-positive persons. This included advocating for the adoption of globally recommended PMTCT and HIV care and treatment guidelines at all levels of the country’s health system to improve access to lifelong treatment.

EGPAF-Uganda is dedicated to advancing basic and operations research to strengthen the effectiveness of the global HIV and AIDS response.

Formative study of PMTCT services to implement the Pratt Pouch as a Model to Expand Infant Nevirapine Prophylaxis in Uganda, Prevent Mother-to-child Transmission of HIV, and Save Infant Lives

Advancing Community Level Action for Improving Maternal and Child Health (MCH) /PMTCT: Evaluation of the Effectiveness of Selected Community Based Interventions to Improve MCH and PMTCT Outcomes in Uganda

Advancing community level action for MNCH, PMTCT Outcomes, Formative and Baseline Research with Community Leaders, Community Members and Health Care Providers in Swaziland, Uganda, and Zimbabwe

Effect of Family Support Groups on Retention in HIV care Among HIV-positive Women Initiated on ART Through PMTCT Programs (Option B+) in selected EGPAF-supported health facilities in Uganda

The activities described here were made possible by the generous support of the American people through the United States Agency for International Development and the U.S. Centers for Disease Control and Prevention under the U.S. President’s Emergency Plan for AIDS Relief, and from Johnson & Johnson, the Elma Foundation, and Unitaid. The content included here is the responsibility of EGPAF and does not necessarily represent the official views of these donors.
